The Carolina Hurricanes average, minimum, and maximum shots are higher than their opponents' shots for games they lost and games they won. This shows that the Hurricanes are not successfully getting their shots in the goal. They are able to get a lot of opportunities to take shots but are either missing or getting them blocked by the goalie or another opposing player. This also means the Hurricanes are allowing more shots into their goal without their opponent needing as many shot opportunities.

The Hurricanes got the most shots on their opponent, the Minnesota Wild, and the least amount on their opponent, the Montreal Canadiens. The Hurricanes held two opponents to a minimum of 19 shots, the New York Islanders and the Anaheim Ducks; however, the same team the Hurricanes got their least amount of shots against, the Montreal Canadiens, is also the team that got the most shots on the Hurricanes with 49 shots.

Amongst the Hurricanes losing games, there were five teams that averaged half or close to half the amount of shots the Hurricanes averaged in those losing games. When the Hurricanes played the Arizona Coyotes, Colorado Avalanche, New York Islanders, San Jose Sharks, and the St. Louis Blues, they managed to double their opponent's average shots, but still lost the game against them. This can mean that the Hurricanes did not take good shot opportunities, or their opponents were better at blocking shots. There were four teams the Hurricanes never won against: Calgary Flames, Tampa Bay Lightning, Washington Capitals, and Winnipeg Jets.

Six of the Hurricanes' opponents averaged more shots than the Hurricanes in games that the Hurricanes won. These teams are the Buffalo Sabres, Colorado Avalanche, Florida Panthers, Montreal Canadiens, New Jersey Devils, and the New York Islanders. The Carolina Hurricanes did well against these teams to block their shots or those teams could have done a better job at taking shots with a better chance to reach the goal. There are nine teams the Hurricanes never lost to: Buffalo Sabres, Chicago Blackhawks, Dallas Stars, Edmonton Oilers, Florida Panthers, Minnesota Wild, Nashville Predators, Philadelphia Flyers, and Vancouver Canucks.

Among the 17 teams that the Hurricanes split the season with, they averaged more shots than all of them, except the Montreal Canadiens who averaged more and the New Jersey Devils who had the same average shots as the Hurricanes.
